### *Deep Tissue Massage*

Deep Tissue is a massage technique that's mainly used to treat musculoskeletal issues, such as strains and sports injuries. It involves applying sustained pressure using slow, deep strokes to target the inner layers of your muscles and connective tissues. This helps to break up scar tissue that forms following an injury and reduces tension in muscle and tissue. It may also promote faster healing by increasing blood flow and reducing inflammation. This treatment is done in the salt cave.

### *Thai Massage*

Thai massage uses gentle pressure and stretching techniques to relax the whole body. It is sometimes referred to as assisted yoga as it is a service that requires you to move with the practitioner, holding extended versions of postures that would be difficult to achieve alone. This massage is performed on a traditional Thai mat, on the ground. Breathe deeply into every crevice as your body is guided through each stretch and posture.
